Survey of Medicaid Beneficiaries	
<hr/>	
<i>Oral Health Status</i>	
Overall, how would you describe the condition of your mouth and teeth?	8
In the past 12 months, have you:	
...felt there is less flavor in your food because of problems with your teeth, mouth, dentures or jaw?	
...had difficulty doing your job or daily tasks because of problems with your teeth, mouth, dentures or jaw?	
...had difficulty chewing any foods because of problems with your teeth, mouth, dentures or jaw?	
...felt uncomfortable about the appearance of your teeth, mouth, dentures or jaw?	
...had painful aching in your mouth?	9
<i>Oral Health-Related Behaviors</i>	
How often do you:	
...brush your teeth two times per day with fluoride toothpaste?	
...floss or clean between your teeth daily?	
...drink tap water instead of bottled water?	
...use tobacco products?	
...consume sugary foods and/or drinks between meals?	18
<i>Time of Last Dental Visit</i>	
When was your last dental visit?	27
<i>Reasons for Not Visiting the Dentist More Frequently</i>	
[If not within the past 12 months] Why did you not visit the dentist more frequently?	28

Table of Contents (continued)

Oral Health-Related Attitudes and Beliefs

How much do you agree to disagree with the following statements?	
My smile is an important part of my appearance.	
The condition of my teeth and gums is an important part of my overall health.	
It is important to me to keep my natural teeth.	
Flossing my teeth everyday is a high priority for me.	
Going to a dentist is not worth the cost to me.	
Going to the dentist is only important if my teeth or gums are bothering me.	38

Survey of Dentist Opinions on Medicaid

Treatment of Medicaid Beneficiaries

In the last 12 months, have you treated any adult or child patients who are enrolled in your state's Medicaid program?	47
[If saw Medicaid patients within the last 12 months] About what percentage of your total patient volume is Medicaid patients?	48

Barriers to Treating Medicaid Beneficiaries

How important are each of these factors in keeping you from treating more Medicaid patients?	
Reimbursement rate of Medicaid	
Appointment cancellation or no-show rate of Medicaid patients	
Denial of payment by Medicaid	
More comprehensive procedures not covered by Medicaid	
Overall claims submission process	
Time it takes to get paid by Medicaid	
Audit of practice activities	
Staffing shortages in my practice	
Process of enrolling as a Medicaid provider	49

Perceptions of Medicaid Beneficiaries

How much do you agree or disagree with the each statement below?	
Low reimbursement will hurt my practice's overall profitability, making it less valuable over time	
It is challenging to provide comprehensive treatment to Medicaid patients	
Compared to my other patients, oral health problems are more severe for Medicaid patients	
Compared to my other patients, Medicaid patients are culturally more difficult to treat	
I am more likely to be sued if I treat Medicaid patients	
Being a Medicaid-enrolled provider negatively affects my reputation among professional colleagues	
Being a Medicaid-enrolled provider positively affects how my community views me and my practice	
Medicaid patients make other patients feel uncomfortable in the office	
Medicaid patients value their oral health	
Medicaid patients comply with recommended treatment plans	67

Table of Contents (continued)

Practice Capacity and Workload

Overall, thinking about the last 12 months, what best describes the capacity of your primary practice to treat patients, regardless of their type of insurance coverage? 85

[If too busy to treat all or able to treat all but overworked] How much is your current workload impacted by staffing challenges in the practice (e.g., not enough staff, unqualified staff)? 85

About these Studies

The American Dental Association Health Policy Institute (HPI) commissioned Qualtrics to conduct online surveys of dental providers and Medicaid beneficiaries in eight states: Maryland, Minnesota, Nebraska, New Hampshire, Ohio, Pennsylvania, Rhode Island, and South Dakota. Data collection for Medicaid beneficiaries began on December 4, 2023 and closed on January 11, 2024. Data collection for dental providers began on December 2, 2023 and closed on December 30, 2023.

For the Survey of Medicaid Beneficiaries, the survey was administered using a nonprobability based sample, and quotas were used to ensure that the sample base was representative of the population of adults, aged 18 or older, in each of the eight states. Responses were reviewed by the researchers for quality control. Respondents were asked if they are enrolled in their state's Medicaid program. Those who answered "yes" were invited to complete the survey. A total of 2,467 Medicaid beneficiaries responded with a +/- 6% margin of error for each state.

For the Survey of Dentist Opinions on Medicaid, this report summarizes results broken out to show dentists who have treated any Medicaid beneficiaries vs. dentists who have not treated any Medicaid beneficiaries in the last 12 months. Due to the low number of responses from dentists practicing in Rhode Island, South Dakota and New Hampshire, results should be interpreted with caution.

Survey of Medicaid Beneficiaries - Number of responses by state

Maryland	302
Minnesota	484
Nebraska	283
New Hampshire	304
Ohio	302
Pennsylvania	302
Rhode Island	239
South Dakota	251
Total	2467

Minnesota	142
Nebraska	116
New Hampshire	51
Ohio	264
Pennsylvania	215
Rhode Island	22
South Dakota	31
Total	999

Executive Summary

Access to Care for Medicaid Adult Beneficiaries

- About half of Medicaid adult beneficiaries who were surveyed reported that they visited the dentist within the last 12 months. For reference, this is higher than 38.7% reported by the Medical Expenditure Panel Survey (MEPS).¹ Among those who did not visit the dentist, the top reason is provider availability. Beneficiaries cannot find a dentist who accepts Medicaid, cannot find a convenient appointment time, or beneficiaries did not know how to find a dental care provider.
- Another important barrier to dental care utilization, usually a very close second, relates to affordability. Adult Medicaid beneficiaries reported that they cannot afford to go to the dentist or that many dental care services they need are not covered, leaving them to pay out of pocket.

Attitudes, Behaviors, and Oral Health Status among Medicaid Adult Beneficiaries

- Access issues are leading to oral health problems. More than one-third of respondents report they very or fairly often felt uncomfortable about the appearance of their teeth, mouth, dentures or jaw in the last year. One-quarter have very or fairly often experienced painful aching in their mouth, and 30% have very or fairly often had trouble chewing. These rates are much higher than for the overall adult population in the United States.
- Adult Medicaid beneficiaries strongly value their oral health. About three-quarters agree or strongly agree that their smile is an important part of their appearance, that the condition of their teeth and gums is an important part of their overall health, and that it is important to keep their natural teeth. There is a disconnect between how adult Medicaid beneficiaries value their oral health and dentist perceptions. Only one in five dentists agree or strongly agree that Medicaid beneficiaries value their oral health.
- Oral health habits can improve among adult Medicaid beneficiaries. Only about half reported that they “most of the time” or “always” brush twice a day with fluoride toothpaste, clean between their teeth, and drink tap water instead of bottled water. Almost half consume sugary foods and beverages 1 to 2 times per day while an additional 25% do so 3 to 5 times per day. Seven out of 10 reported at least occasional usage of tobacco products.

Barriers to Medicaid Participation for Dentists

- About 60% of dentists who were surveyed reported that they have treated Medicaid beneficiaries during the last 12 months. For reference, this is higher than larger administrative data sets show, where about one-third of U.S. dentists saw at least one Medicaid beneficiary.²

- The top pain points keeping dentists from seeing more Medicaid beneficiaries are low reimbursement rates (80% citing this reason), appointment cancellation and no-show rates (60%), denial of payment by Medicaid programs (58%), and Medicaid's limited coverage of comprehensive procedures (49%).
- Only 6% of dentists currently treating Medicaid beneficiaries are not busy enough and can absorb more patients. However, 62% of dentists indicated that staffing challenges are extremely or very much a factor in their heavy workload with an even higher rate for those currently treating Medicaid beneficiaries.

The Big Picture

This research suggests four important ways policymakers can improve access to dental care for adult Medicaid beneficiaries in the states we studied. These include:

- Ensure Medicaid programs cover comprehensive dental care services. Both providers and beneficiaries reported that lack of coverage for certain dental care services was an important issue. On the beneficiary side, it poses a major barrier to care. On the provider side, it is an important barrier to participation.
- Improve navigation services for beneficiaries. Finding and getting to a dentist who participates in Medicaid is challenging for beneficiaries, not necessarily because the dentists do not exist, but because there is no easy way to find them. State Medicaid programs should consider building Open Table-type of platforms to help beneficiaries find convenient appointment times with minimal friction, including even linking beneficiaries with subsidized transportation services. These reforms will help fill the schedules for participating dentists who are not busy enough.
- Address dentist participation pain points. Top of the list is increasing reimbursement rates. In addition, streamlining administration and findings ways to reduce cancellation and no-show rates is important. The latter might be achieved through improved navigation services or expanded coverage, highlighted above.
- Enhance healthy behavior promotion services. Beneficiaries reported high rates of behaviors that negatively affect oral health. There is an opportunity for Medicaid programs to include oral health-related “healthy behavior coaching” in their beneficiary outreach, such as connecting beneficiaries with nutritional counseling or tobacco cessation programs This must be done in a client-centric way, as there are broader social determinants of health to consider.

Methods

- We surveyed Medicaid beneficiaries and dentists in eight states: Maryland, Minnesota, Nebraska, New Hampshire, Ohio, Pennsylvania, Rhode Island, and South Dakota. The survey of Medicaid beneficiaries was conducted December 4, 2023 through January 11, 2024. The survey of dentists was conducted December 2, 2023 through December 30, 2023.
- In total, 2,467 Medicaid beneficiaries responded to the survey of Medicaid beneficiaries across the eight states and 999 dentists responded to the survey of dentists.

Reasons For Not Visiting the Dentist More Frequently

[If not within the past 12 months] Why did you not visit the dentist more frequently? (Select all that apply.)

Responses to this question are combined into 5 larger categories: provider access, affordability, no perceived need, fear/anxiety, other. If one or more of the items in a category was selected, it was counted as 1 response for the larger category.

The individual items for each of the larger categories are as follows:

1. Provider access

- It is too hard to find a dentist that accepts my insurance plan
- I cannot travel to a dentist easily
- I cannot find time to get to the dentist
- I do not know where to go to receive dental services
- I could not find a dentist who speaks my language or is of a similar racial or ethnic background as me

2. Affordability

- I cannot afford to go to the dentist
- Many services are not covered by my plan so I end up having to pay with my own money

3. No perceived need

- My mouth is healthy so I do not need to visit the dentist
- I do not have any of my original teeth

4. Fear / anxiety

- I am afraid of going to the dentist

5. Other

- Other
- No reason
